

MANZEB SOOMRO

Backend Developer — C#/.NET, Python & API Integration

+49 151 47229487 | zebisahir31@gmail.com | Stuttgart, Germany | [linkedin.com/in/manzeb-soomro-91300118b](https://www.linkedin.com/in/manzeb-soomro-91300118b) | github.com/manzebsoomro

PROFILE

Backend-focused software engineer with 1.5+ years of experience designing, implementing, and documenting API connections across polyglot backend stacks, including C#/.NET, Python/Django, and Flask. Hands-on experience with data-driven architectures spanning relational (PostgreSQL) and NoSQL (MongoDB) databases, asynchronous messaging with RabbitMQ, and containerized deployments with Docker and Kubernetes. Comfortable integrating external APIs and third-party services (OpenAI/GPT, Azure Active Directory) into production systems. Practiced in Agile/Scrum teams, with a structured, analytical, get-it-done approach to complex technical problems, and a strong habit of internal knowledge-sharing through technical documentation. Currently pursuing an M.Sc. in Computer & Systems Engineering at TU Ilmenau. Productive with AI-assisted development tools (Claude Code, Cursor, Copilot-style agents). German at B2 level.

EXPERIENCE

Jayspur SMC PVT LTD — Associate Software Engineer

Aug 2023 – Dec 2024

- Designed and maintained REST API connections between backend services and frontend applications, as measured by 35% faster response times across 10 production endpoints, by optimizing Python/Django services backed by a PostgreSQL relational database.
- Improved backend reliability and reduced defects, as measured by 50+ resolved production bugs and a cleaner sprint backlog, through structured, analytical debugging and root-cause analysis across backend and frontend code.
- Delivered containerized, production-grade deployments, as measured by consistent CI/CD release cycles, by packaging services with Docker and orchestrating them with Kubernetes on Azure Web Apps.
- Practiced agile, cross-functional collaboration within a Scrum team, as measured by faster sprint turnaround, by coordinating with product, QA, and business stakeholders and sharing technical and API documentation in Confluence for internal knowledge transfer.
- Increased engineering throughput, as measured by shorter implementation cycles, by adopting AI-assisted coding tools (Claude Code, Cursor) to keep focus on architecture and API design.

7CTECH — Cyber Security Intern

Feb 2025 – Apr 2025

- Applied analytical and conceptual problem-solving to quickly assess complex systems, as measured by reaching full GDPR & ISO 27001 compliance status, by monitoring infrastructure and documenting findings in a structured, Scrum-adjacent workflow using Jira and Confluence.
- Strengthened system reliability through a get-it-done approach, as measured by fewer recurring vulnerabilities, by independently conducting structured audits and log reviews and proposing hardening fixes.

PROJECTS

Cyber Compliance GPT — C#/.NET, MongoDB, RabbitMQ, REST APIs, LangChain, Azure

2024

- Cut manual compliance review time by ~60%, as measured by reduced audit hours, by architecting a multi-service compliance assistant with a C#/.NET service layer, REST API endpoints, and integration with the OpenAI/GPT external API for natural-language policy queries against ISO 27001, GDPR & NIS2.
- Enabled scalable, schema-flexible data-driven architecture, as measured by structured retrieval of policy and audit records, by implementing MongoDB as the primary NoSQL data store.
- Decoupled long-running analysis from the request/response cycle using RabbitMQ for asynchronous message processing, and deployed the full solution on Azure with Active Directory integration for secure, production-grade access control.

Cyber Aware Platform — Vue.js, Real-Time Dashboards, SIEM Integration

2023 – 2024

- Increased security awareness scores by 40% in 3 months, as measured by post-campaign survey results, by building a responsive Vue.js frontend with real-time dashboards for phishing simulation campaigns.
- Enabled behavior-driven security insights, as measured by correlated user activity data, by integrating SIEM data feeds into the dashboard UI, backed by a full CI/CD deployment pipeline.

Hospital Management System — Python, Flask, SQLite, HTML/CSS/JS

2023

- Delivered a secure full-stack web app for patient data, scheduling, and billing, as measured by role-based access control and encrypted storage, by building RESTful APIs and a relational schema in Flask and SQLite — the same scheduling, access-control, and relational data-modeling patterns used in reservation and booking-style systems.

EDUCATION

Technische Universität Ilmenau — M.Sc. Computer & Systems Engineering

2026 – Current

Ilmenau, Germany | Focus: Systems Architecture, Distributed Computing, and AI/ML Integration

Szabist Hyderabad — B.Sc. Software Engineering

Sept 2018 – Jun 2023

Hyderabad, Pakistan | Coursework: Software Development, Algorithms, Computer Networks, Systems Security

SKILLS

Frontend: TypeScript, JavaScript, React, Redux, Zustand, React Hook Form, Jest, Vitest, Vue.js, HTML5/CSS3, Responsive Design

Backend: Python, Django, Flask, C#/.NET, Node.js, REST APIs, MongoDB/NoSQL, RabbitMQ, Spring Boot, C++, Bash

Tooling & Collaboration: Jira, Confluence, Git, Agile/Scrum, ServiceNow, Claude Code, Manus, Cursor

Cloud & DevOps: Azure (Web Apps, Active Directory), Docker, Kubernetes (basic), Ansible, CI/CD

Security & Compliance: OWASP, Penetration Testing, SIEM, IDS/IPS, GDPR, ISO 27001, VPN/Firewalls

Languages: English: C2 Proficient | German: B2
